

Protect Your Potatoes with Douglas Fir & Mancozeb

NUBARK® MANCOZEB is specially formulated with Douglas fir bark and 6% Mancozeb for application on whole or cut potato tubers. This seed treatment formulation aids in the control of Fusarium seed-piece decay and reduces the spread of phytophthora infestations during seed cutting operations. Douglas fir bark offers hydrophobic activity on cut seed surfaces while the unique formulation provides improved handling.

Unique formulation
offers improved handling

Douglas fir bark
is a natural wound healer
on the cut seed-piece surface

Complements your system
by helping seed-pieces dry
when used with liquid seed-
piece applications

Directions for Use:

Use 1 lb NUBARK MANCOZEB Potato Seed Protectant Fungicide per 100 lbs of whole or cut potato seed-pieces. Apply so that the entire surface of the seed-piece is thoroughly covered by the fungicide. To avoid breakdown of seed-pieces, treat just prior to planting.
