

Supplement Your Small Grains and Pulses

STEPUP® SP is a nutritional seed treatment designed specifically for small grains and pulses, containing protein hydrolysate (N), soluble potash (K₂O), manganese (Mn) and zinc (Zn). This chemical composition was specifically developed to target key natural signaling molecules that are routinely expressed in germinating seeds as they interact with and respond to their external environment. STEPUP SP can enhance growth, increase respiration, stimulate the development of root fiber and hair, and induce and express natural disease tolerance.

Supplements seed exudates that are released from the imbibing seed during the early stages of germination

Increases root hair and fiber, allowing the plant to better utilize nutrients and water intake

Produces faster-emerging seed and seedlings

Directions for Use:

STEPUP SP is recommended to be an additive to current standard seed treatments and is not intended to be used alone. Shake well before using. Use 1-2 fluid ounces of STEPUP SP per 100-weight (cwt) of seed.

Enhances Growth and Stimulates Development

STEPUP SP 4-Year Average Performance on Winter Wheat (2016-2019)

Trials are regionalized each year. South Palouse trials are placed from Palouse, WA to Lewiston, ID. North Palouse trials are placed near Fairfield, WA. Walla Walla trials are placed in the Walla Walla, WA valley.

The four year average is calculated from base seed treatment packages used each year and may include one or more packages. All base treatments include insecticides and fungicides. The same base packages were used for the "Base + STEPUP SP" treatments.
