

Keep your disease pressure in check.

SONATA®

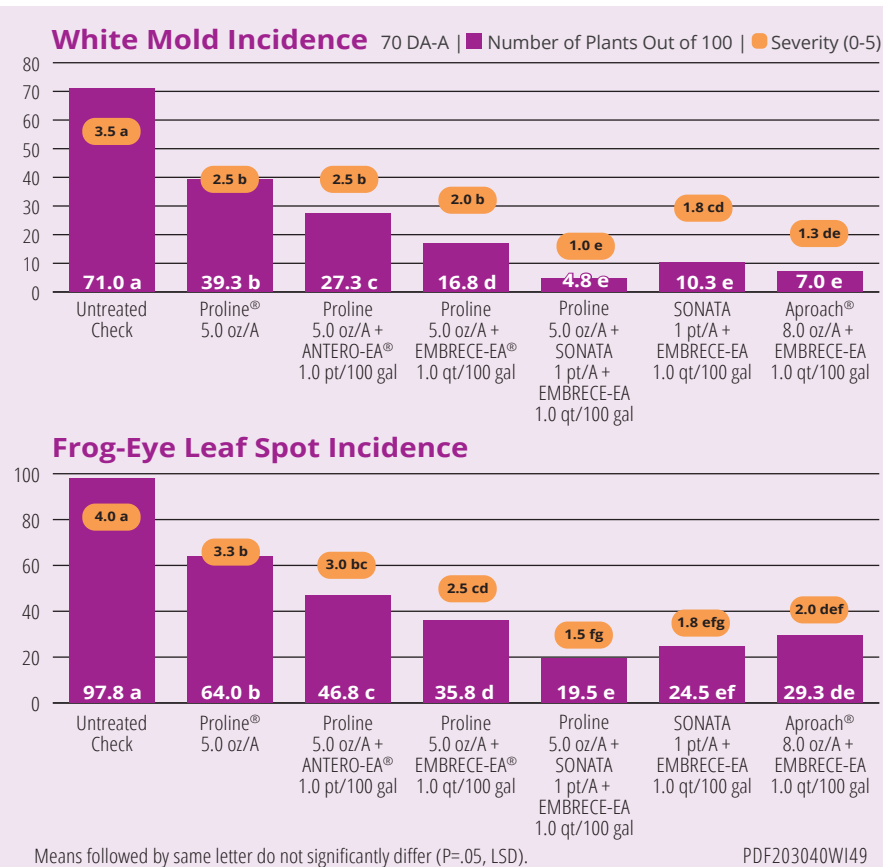

SONATA® is a biofungicide with live bacteria spores that induce plants' natural defenses to resist disease development as well as anti-fungal compounds that have contact fungicidal activity.

SONATA enhances naturally present protections within plants with contact activity that acts directly on pathogens. It also includes antifungal compounds that break down existing fungal cell walls and inhibit new cell formation. Because of this contact activity, SONATA has curative properties against fungal pathogens and has multi-site mode of action, ideal for fungicide resistance management and disease control.

BENEFITS:

- Prevents pathogens from establishing in the plant
- Great tank mix partner
- Preventive contact fungicide activity
- Induces systemic resistance within the plant

Use SONATA for Effective Disease Control in Soybeans
