

**AQUATE<sup>®</sup> PRO** is an advanced formulation of 4 proprietary soil surfactants that significantly improve the availability, distribution and infiltration of water into the root zone. Quality wetting agent applications have also been proven to increase fertilizer efficiency, allowing for improved uptake into the plant. **AQUATE PRO** can be applied over-the-top using traditional spray equipment or through injection/fertigation methods. **AQUATE PRO** provides extremely flexible application rates from 0.3 oz to 6oz/1000 depending on soil type, frequency of application and desired result.

## Features

- Advanced combination of infiltration and hydration soil surfactants
  - Hydration surfactants that improve soil’s ability to retain water over time
  - Infiltration surfactants that help water penetrate hydrophobic soils and organic matter
- Improves water movement into poorly draining, heavy or compacted soils
- Highly concentrated, stable formulation

## Benefits

- Infiltration, distribution and efficiency all-in-one
- Increases irrigation and applied nutrient distribution and efficiency
- Maintains consistent moisture throughout the rootzone to maximize water efficiency
- Reduces callbacks for dry spot maintenance
- Improves water use efficiency, resulting in reduced overall water use
- Limits water run-off in heavy, compacted or hydrophobic soils
- Safe to apply over-the-top
- Great tank mix partner
- Reduces plant stress
- Faster moisture RECHARGE from subsequent irrigation and rainfall
- Reduces water loss due to runoff from hydrophobic, poor draining, heavy, compacted or high organic matter soils

## Principal Functioning Agent

	<b>Active Ingredient:</b>
85.00% .....	Oxirane, Methyl-, Polymer with Oxirane
	<b>Inert Ingredients:</b>
15.00% .....	Polyethylene Glycol, Bis(2-ethylhexyl) sodium sulfosuccinate and water
100.00% .....	<b>Total</b>
