

Efficient plant growth is a balancing act.
Gypsum-based fertilizer prevents soil tie-ups from throwing it off.

TILL-IT® WIRED™ GYPSUM

TILL-IT WIRED GYPSUM is a high-quality, specialty fertilizer blend containing 17% sulfur, 22% calcium, and 0.75% humic carbon in uniformly sized particles for fast release and accurate delivery.

Calcium and sulfur are essential nutrients for plant growth and development, and TILL-IT WIRED GYPSUM delivers it precisely versus other forms. Its benefits as a fertilizer, soil conditioner, and soil amendment are clear:

- Conditions soil faster than other gypsum sources
- Increases porosity of soil, improving the soil structure faster than compost, so soil retains all of the oxygen, water, and nutrients needed
- Breaks up soil and displaces salts
- Enhances fertilizer programs with precision placement
- Acts as foundation for prescription fall fertility amendment programs

Like Wilbur-Ellis' entire TILL-IT line of fertilizers, TILL-IT WIRED GYPSUM is wired with nutrient efficiency to increase yield:

- Contains extracted PURIC® humic carbon technology, which increases nutrient uptake, root mass, soil buffering capacity, water holding capacity, and, most importantly, potential yield
- Immediate activation with water-soluble, extracted humic carbon for improved nutrient uptake

RATES AND APPLICATION

Follow the rates and application recommendations as shown.

| USE | RATE |
|---|--------------|
| Banded applications on variety of crops | 250-500 lb/A |
